#### Sandbox Consult

By: Tara Weinreb iOS Intern Project

#### Purpose

- Provides doctors with a **simulated consult experience** in which they can **learn** how to use the Teladoc consultation system.
- Serves as a **beta testing environment** for new features.

# Confident Doctors >>> Quality Consultations >>> Satisfied Patients

#### **Brainstorming**

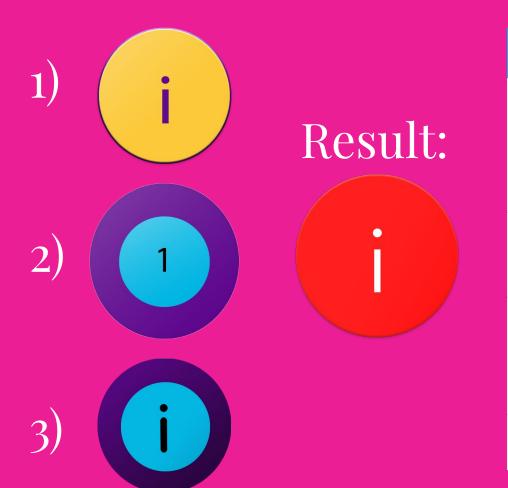

- How should the sandbox consult **look**?
- What features would **enhance** the doctor's **learning**?

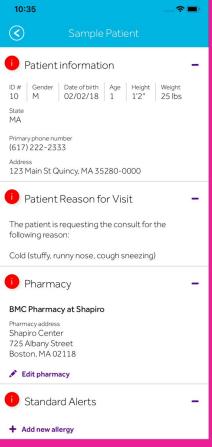

#### **Idea**

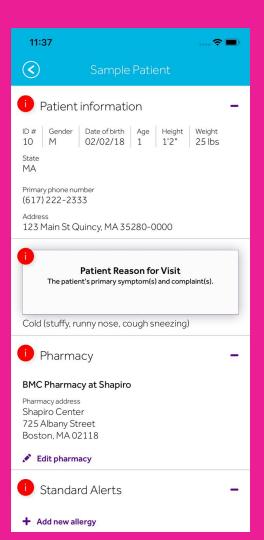

- Facilitate learning with **popup messages** that **explain** exactly what the doctor is supposed to **do, tap, and ask** the patient at each point in the consult.

#### **Design & Prototyping**

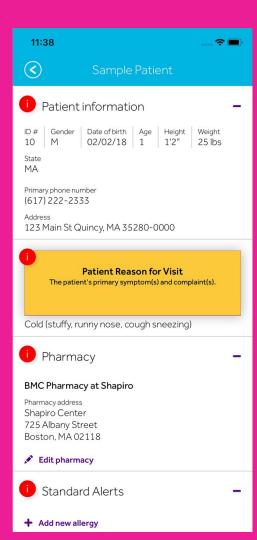

- Trying various **sizes**, **colors**, and **placements** for the information buttons and popups.
- Deciding where the information **buttons** should be placed on the consult screen.
- Deciding where the popup **labels** should appear on the screen.

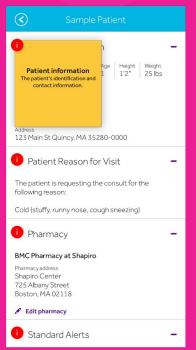

### White Or Gold?

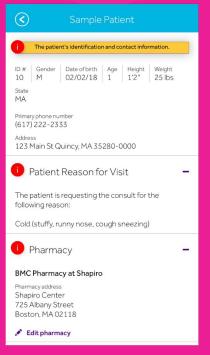

#### How big should the message be?

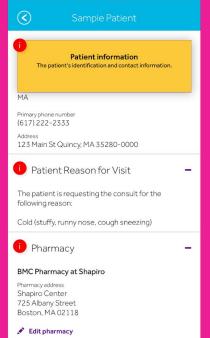

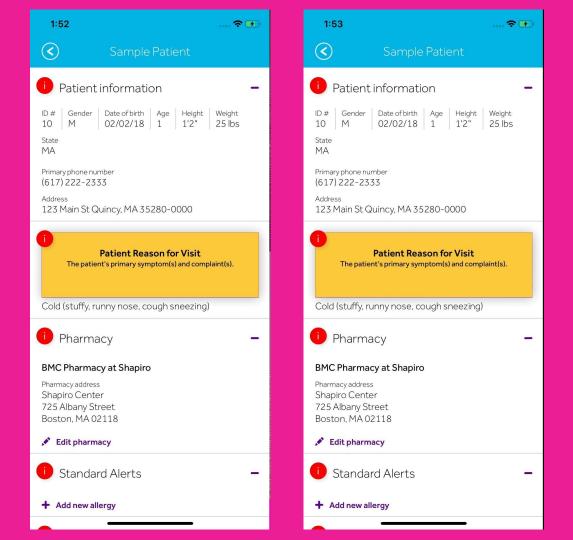

#### **Animations**

- What types of animations would enhance user experience and feel "right"?
- How **fast** should the animations be?
- Finding a balance between **noticeable vs. center of attention**.
- Making accessibility friendly choices.

## Subtle Or Slide in?

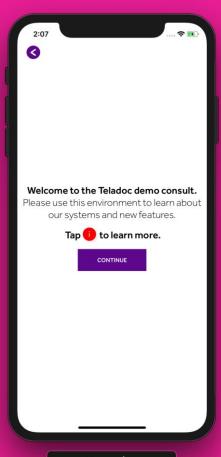

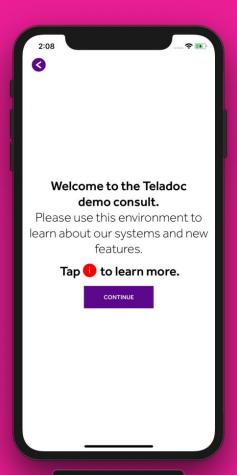

#### **Implementation**

- Eliminate API calls by saving local JSON files with sample patient data.
- Use **Core Graphics** for highly customized information buttons and labels.
- Use **Core Animation** with the **Spring** library for animations and scrolling effects.

#### **Additional Considerations**

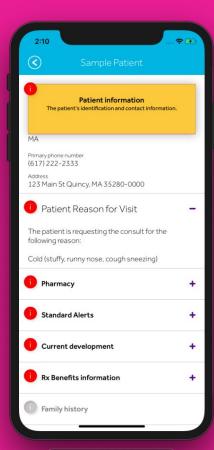

- Optimizing for **accessibility** with text that scales up dynamically within the message frame.
- **Localization** of all text for future translation of the app.
